# Managing Assets for Resource Management and Sustainability A Discussion Paper

By  
Adrian Ellson, MMgtS psc

 Making new through simple solutions!

## Introduction

2

*Total asset management will provide the required informed input that will contribute to making the University's budget planning cycle and process more effective. The University's asset management objectives are therefore focused on the following key areas:*

- *providing an asset base that matches and supports the business needs of the University;*
- *consolidating existing corporate capital assets and optimising asset utilisation;*
- *meeting its statutory compliance obligations; and*
- *aligning asset operating costs with business planning and service delivery requirements.*

University of Tasmania, Strategic Asset Management Plan 2006 – 2011, version 1.2, November 2005, page 9

 Making new through simple solutions!

## Intorduction

3

*Putrajaya Corporation - enhancing its environmental sustainability by reducing the carbon footprint, through the four primary pillars of energy, environment, economy and social perspective*

North West Shelf Gas Plant at Night

**E** Making new through simple solutions!

## Purpose

4

*The purpose of this paper is to examine the emerging Strategic Asset Management practices and tools, with the view to determining if we individually and collectively can be confident in predicting future outcomes based on today and past actions, with the view to improving intergenerational resource management and sustainability.*

**E** Making new through simple solutions!

## Approach

5

- *what is it that we are trying to achieve with respect to intergenerational resource management and sustainability within the framework of Climate Change;*
- *the underlying Operational Asset Management framework that provides data to the Strategic Asset Management practices and tools; and*
- *to provide a specific Carbon accounting and management scenarios that can be used to explain and demonstrate the necessary features of a Strategic Asset Management framework, systems and analyses in the future intergenerational management of resources and sustainability*

 Making new through simple solutions!

## Climate Change

- *Variations in global-average temperature over the past century have been measured in the near-surface air, in the lowest 10 km of the atmosphere (the troposphere), and in the ocean. All measurements indicate a long-term warming.*
- *The surface of the Earth has warmed by about 0.74° C since the start of the 20th century. This long-term warming trend is overlaid on short-term fluctuations due to such factors as El Niño and La Niña. Data over the past decade provide little insight into long-term trends; the period is simply too short. Nevertheless, the past decade has been the warmest in the instrumental record.*
- *Sea surface temperatures and ocean heat content for the upper 300m and 700m of the ocean show long-term warming. Global average sea level has risen by 17 cm during the 20th century<sup>7</sup>.*

Australian Department of Climate Change – Hot Topics 'Has Global Warming stopped?'  
<http://www.climatechange.gov.au/climate-change/-/media/publications/science/hot-topics-globalwarming-v2.ashx>  
of 5 February 2010

## Climate Change

## Climate Change

*Full implementation of this Agreement will result in a nationally-compatible, market, regulatory and planning based system of managing surface and groundwater resources for rural and urban use that optimises economic, social and environmental outcomes ..*

Intergovernmental Agreement on a National Water Initiative, clause 23 'Objective', page 3

## Science of Asset Management

### **Financial Asset Management:**

- *Investment management - the sector of the financial services industry that manages collective investment schemes.*
- *Global assets under management*
- *List of asset management firms*
- *Fixed assets management - An accounting process that seeks to track fixed assets for the purposes of financial accounting.*

## Science of Asset Management

### **Physical Asset Management:**

- *the practice of managing the whole life cycle (design, construction, commissioning, operating, maintaining, repairing, modifying, replacing and decommissioning/disposal) of physical and infrastructure assets such as structures, production and service plant, power, water and waste treatment facilities, distribution networks, transport systems, buildings and other physical assets. Infrastructure Asset Management expands on this theme in relation primarily to public sector, utilities, property and transport systems.*

## Science of Asset Management

### **Enterprise Asset Management:**

- *the business processes and enabling information systems that support management of an organisation's assets, both physical (such as buildings, equipment, infrastructure etc) and non-physical such as:*
- *IT asset management - the set of business practices that join financial, contractual and inventory functions to support life cycle management and strategic decision making for the IT environment. This is also one of the processes defined within IT Service Management.*
- *Digital asset management – A form of electronic media content management that includes digital assets.*

## Science of Asset Management

### **Systematic Asset Management:**

- *the holistic process of managing assets and the inter-relationships between them and between the assets and the community. This process occurs within a framework for asset lifecycle optimisation in order to ensure the resultant services will continue to enhance the community's quality of life, while maintaining urban sustainability.*

# Science of Asset Management

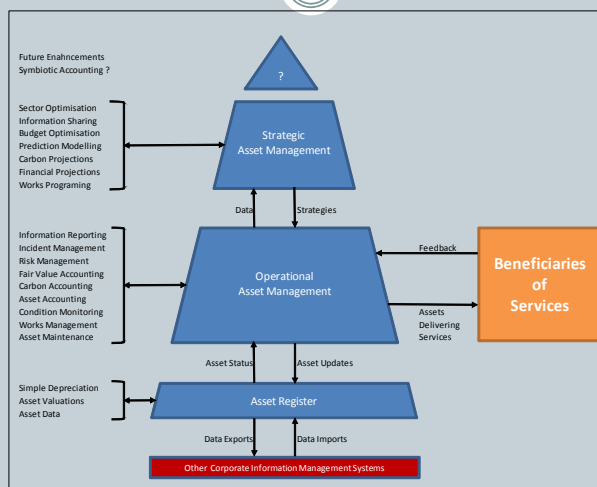

*The defining characteristic of asset management is not how it is defined but in how it is applied.*

Hamersleyensis

# Science of Asset Management

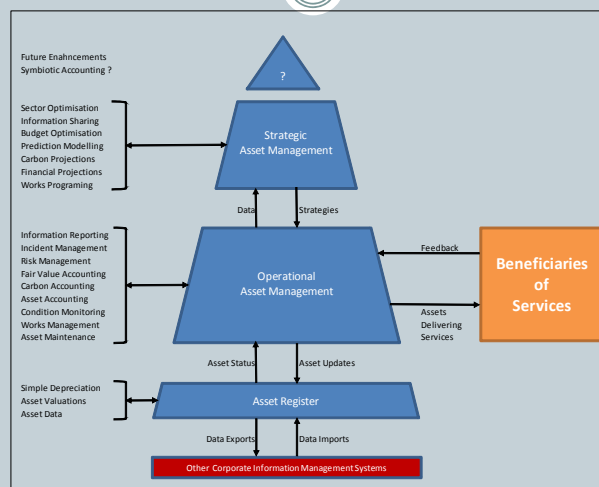

# Science of Asset Management

The Swan River Trust is currently seeking an asset management system to help it manage the

- *naturally, vegetated shorelines – both existing natural bushland and planted shorelines to promote shoreline stability and prevent erosion. Types vary but include trees, shrubs and grasslands.*

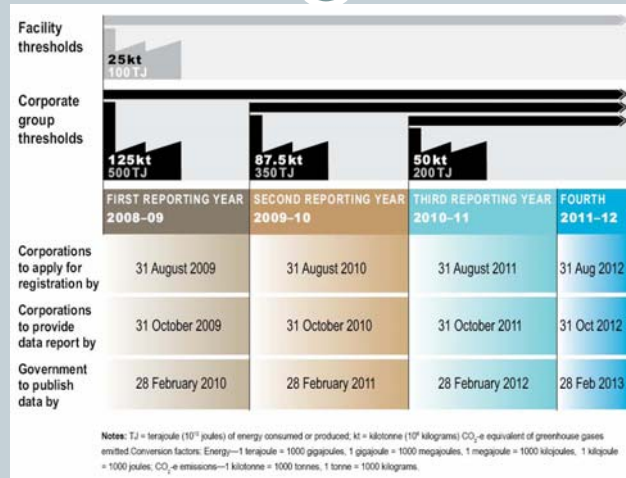

Swan River Trust, 45809 Request DEC Asset Management System for Swan River Trust, page24

# Science of Asset Management

## Carbon Accounting and Management

## Carbon Accounting and Management

*A company's investment in measurement of its carbon footprint can serve multiple goals. When greenhouse gas emissions are measured and reported, they are generally better managed.*

*Best practice also requires that an organisation make transparent to the public steps taken to measure, reduce and offset emissions so that any carbon neutral claims can be objectively assessed.*

National Carbon Offset Standard

## Carbon Accounting and Management

*The Standard specifies:*

- *the types of carbon offsets that constitute genuine, additional emissions reductions in the context of the CPRS;*
- *the general principles and requirements for calculating the carbon footprint of a product or organisation;*
- *requirements for transparent recording of the carbon footprint, measures taken to reduce emissions and the amount reduced and the emissions amount offset and the type of carbon offsets purchased and retired; and*
- *requirements for auditing the veracity of carbon footprint calculations and offset claims.*”

National Carbon Offset Standard

## NGERS Calculator

- **Scope 1 emissions:** *The release of greenhouse gas into the atmosphere as a direct result of activities at a Facility.*
- **Scope 2 emissions:** *The release of greenhouse gas as a result of electricity generation, heating, cooling or steam that is consumed by a Facility.*
- **Scope 3 emissions:** *The release of greenhouse gas into the atmosphere that is generated in the wider economy as a consequence of a facility's activities but that are physically produced by another Facility.*

National Carbon Offset Standard

## NGERS Calculator

- **Method 1** – using default emissions factors derived from the latest version of the National Greenhouse Account Factors;
- **Method 2** – a method using industry sampling and Australian or international standards listed in the NGER (Measurement) Determination or equivalent for analysis;
- **Method 3** – a method using Australian or international standards listed in the Determination or equivalent standards for both sampling and analysis of fuels and raw materials. Method 3 is very similar to method 2, but it requires compliance with Australian or equivalent documentary standards for sampling; and
- **Method 4** – direct measurement using continuous or periodic emissions monitoring.

National Carbon Offset Standard

## NGERS Calculator

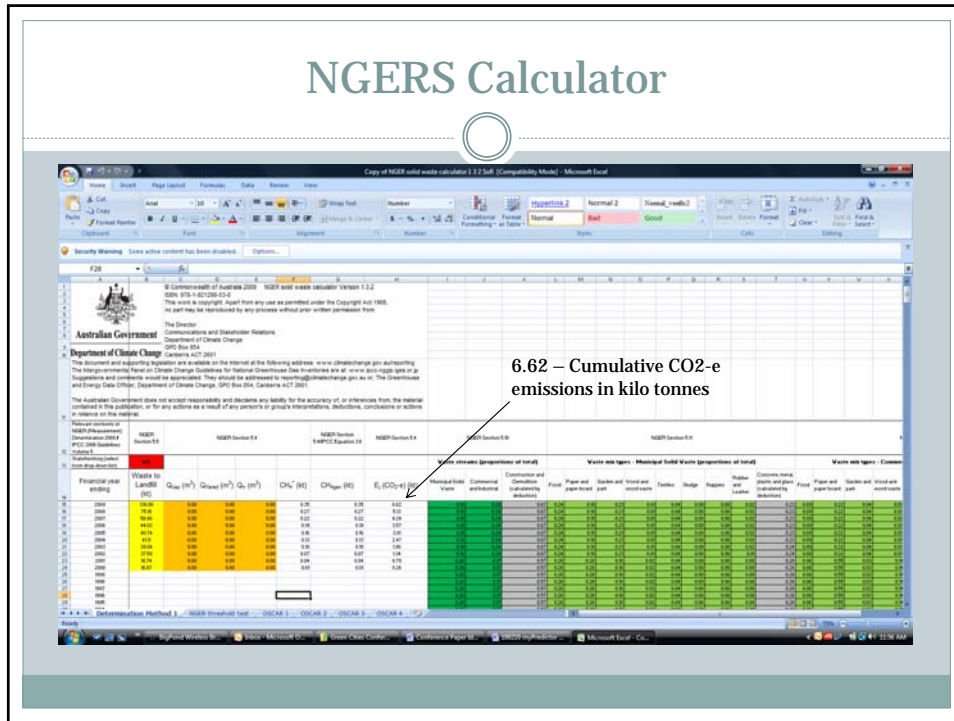

*Prepare a greenhouse gas emissions inventory report, which contains the following components:*

- *the organisation boundary;*
- *greenhouse gas emissions sources associated with the organisation boundary;*
- *greenhouse gas emissions factors and calculation methodology;*
- *activity and emissions data collected;*
- *assumptions used;*
- *all exclusions and their justification; and*
- *final calculated greenhouse gas emissions attributable to the organisation boundary.*

National Carbon Offset Standard

# Operational Asset Management

# Operational Asset Management

# Operational Asset Management

## Strategic Asset Management

- *The objective of Strategic Asset Management is to empower users of this capability to analyse operational data and information within the context of holistic, predictive, scenario and comparative (or benchmark) modelling to develop informed or knowledgeable solutions with respect to systems of assets down to, and inclusive of specific assets within the system.*
- *Strategic asset Management also provides the confidence necessary to invest and implement structured change to asset use, operation and maintenance.*

## Strategic Asset Management

### **Introductory comments:**

- **Shoot the Corporate Accountant**
- **Shoot the Corporate Engineer**
- **Keep the analysis simple using a few key performance indicators, preferable those which are quantitative in nature**

Introductory comments:

- Shoot the Corporate Accountant
- Shoot the Corporate Engineer
- Keep the analysis simple using a few key performance indicators, preferable those which are quantitative in nature
- Model the outcome to meet the reporting requirement

# Strategic Asset Management

# Strategic Asset Management

## Some rules for modelling Sustainability:

- Sustainability is a function of 1) design and technology, 2) use and operation and last 3) maintenance and treatment.
- Sustainability analysis/modelling assumes a baseline.
- Sustainability analysis/modelling are undertaken on three basic scenarios:
  - Do nothing
  - Do something now within the constraints of a project
  - Do something progressively within the constraints of normal work practices
- The introduction of currency (\$\$) early in the sustainability analysis/modelling process introduces too many unwanted and unnecessary variables.
- Sustainability analysis/modelling and reporting should align to government requirements to the most practical extent possible.

# Strategic Asset Management

## Strategic Asset Management

## Strategic Asset Management

*Modelling at a strategic level :*

- *is based on data collected at the operational level and the quality of modelling analyses and outputs id dependent on the quality of data used to populate the model;*
- *is used to build confidence with respect to the development and implementation of asset management strategies; and*
- *modelling does not replace human decision making – it aids the process of making decisions.*

# Concluding Remarks

# Concluding Remarks

## Concluding Remarks

*Improving intergenerational resource management and sustainability will be achieved through the application of strategic asset management, with the purposeful intent of:*

- *information sharing and benchmarking to identify the most successful course of actions or scenarios being adopted by peer and other organisations;*
- *tailoring predicative models to specific corporate service(s) delivery scenarios based on monetary costs and Carbon emissions out as far as possible but in doing so noting the decreasing level of accuracy;*
- *developing appropriate asset management strategies to support the delivery of services; and*
- *monitoring the implementation of the asset management strategies whilst implemented and refining the strategies as appropriate based on results and other feedback.*
